

Introducing

WellSky Home Health CareInsights™

Unlocking the power of data to create the most advanced and accurate care support solution for home health

New WellSky Home Health CareInsights™ gives your team superpowers never seen before in any EMR.

WellSky Home Health CareInsights transforms EMR data into an intelligent care optimization and decision-making support solution that improves patient outcomes. As the home health industry undergoes historic changes, WellSky CareInsights helps you proactively manage your patient population, excel in value-based care arrangements, and maximize efficiency.

Elevate clinical confidence and decision-making with insights you can trust.

Powered by algorithms drawn from the data of over two million home health admissions, WellSky CareInsights analyzes your entire patient population to present a comprehensive view of key factors that inform quality care: hospitalization risk, care setting suitability, and patient visit utilization. This innovation drives a culture of continuous improvement by providing visibility of quality metrics, acute care hospitalizations, and emergency department usage. With specialized features to prevent LUPAs and optimize utilization, WellSky Home Health CareInsights will be an essential partner to help your agency succeed under the Patient Driven Groupings Model (PDGM).

“WellSky Home Health CareInsights allows me to confidently face the challenges that PDGM presents.

With CareInsights, Concierge Home Care can provide higher quality care, create better outcomes, and separate ourselves from our competitors.”

Linda Murphy, RN, BSN, COS-C, CDP, RN-BC
CEO of Concierge Home Care

Home health's **most advanced** and **accurate** care support solution.

Key features for exceptional care.

Real-time hospitalization risk

Real-time visibility into your agency's entire census from the CareCommand™ dashboard allows administrative staff to deploy the right clinical resources at the right time so you can improve patient outcomes and decrease hospital readmissions. And you'll have the data to market your success and expand your referral relationships.

Hospitalization risk

Care setting suitability analytics

If a patient's health is declining, home health may not be the right care setting. WellSky gives you data-driven support to discuss care setting with a patient's physician. For home health agencies that also provide hospice, this feature allows for thoughtful and efficient resource planning when the patient moves to that care setting.

Care setting suitability

LUPA prevention

Under PDGM, LUPA thresholds will vary, so rather than tasking clinicians to remember each threshold, WellSky Home Health CareInsights™ shows the progression of a patient's visits and alerts the clinician of a possible LUPA. This ensures the patient receives the appropriate level of care and the agency receives appropriate reimbursement.

LUPA prevention

Visit Utilization Insights

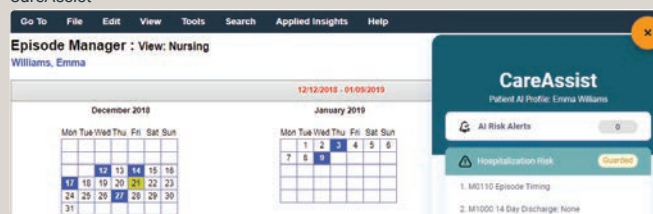

Visit Type	This Episode	25th Percentile	PDGM Median	75th Percentile	LUPA Assessment
SN	6	3.0	6.8	7.2	Under
MSW	3	1.8	3	4.2	In Line
PT	5	0.8	1.2	1.8	Over
OT	1	0.3	0.5	1.75	In Line
ST	6	3.8	6.8	7.2	In Line
HHA	1	1.8	2.5	3.2	Under
TOTAL	15	9.8	13	17.2	In Line

LUPA Assessment: 5/5

CareAssist™

WellSky Home Health CareInsights™ provides its insights where your clinicians need them most – right at their fingertips as part of their workflow. The CareAssist window is always just a click away, providing a real-time snapshot of a patient's clinical and non-clinical risk factors.
